## Hurricane Preparedness - Be Ready Before The Storm

Hurricane season runs June 1 to November 30 every year. Hurricanes can bring severe winds, heavy rainfall, storm surge, coastal and inland flooding, rip currents, tornadoes, and even landslides.

Before June 1st, prepare for storms by finding your evacuation zone, deciding where to shelter, building your disaster supply kit, and strengthening your home (DO NOT tape your windows). Visit the HurricaneStrong website and use the checklists to complete your plan today.

During a hurricane it is critical to stay safe and put your disaster preparedness plan into action.

Take all safety precautions, monitor the storm, and follow the advice of authorities, especially if they order evacuations. If you don't evacuate, stay indoors and shelter in an interior, windowless room during high winds.

Lastly, after a hurricane downed power lines, contaminated water, and flooded roadways create hazardous conditions. Stay indoors until authorities say it's safe to leave or return home and Use generators safely during power outages.
